

Inbjudan till seminarium

Application Performance Management

"Take on the cloud with confidence"

Onsdagen 21 september 2011

14.00–17.00

World Trade Center—Stockholm

Cloud is revolutionizing IT, it is a powerful cost-saving trend. However the migration to the cloud brings risks and challenges:

- Migration reduces transaction visibility while increasing application complexity
- Performance degradation and outages during the migration
- Requirement for performance monitoring and triage after the migration

To maintain continuity and mitigate risks organizations should develop a complete Application Performance Management strategy

OPNET APM Xpert Suite provides tools and methodologies to manage the cloud

- Map application dependencies
- Baseline application performance
- Maintain visibility across physical and virtual
- Manage application sprawl
- Manage server mobility
- Monitor applications in the cloud

By implementing a comprehensive APM solution, IT organizations can realize the following high-impact benefits:

- Observe the experience of real application users live, and alert on SLA violations.
- Trend historical performance of an application to detect or confirm degradation in user experience.
- Accelerate troubleshooting and remediation.
- Eliminate "finger-pointing" among teams, promoting cooperative approaches to solving problems.
- Detect early warnings signs of application performance problems and take preventive action.

Rebendo är ett svenskt konsultföretag med en produkt- och tjänsteportfölj som maximerar, kvalitetssäkrar och mäter prestandan i de centrala IT-systemen. Rebendo startade sin verksamhet 2001 och huvudkontoret ligger i Stockholm, Gröndal.

Vår affärsidé är att säkerställa maximal tillgänglighet och effektivitet i IT- och telefoniverksamheten på företag, organisationer och offentlig sektor. Rebendo är skandinaviska representanter för Opnet.
